

FPA2 joint block -- FULL-DETECTOR post-fit residual (hires), 58 windows stitched, 1024/1024 rows covered

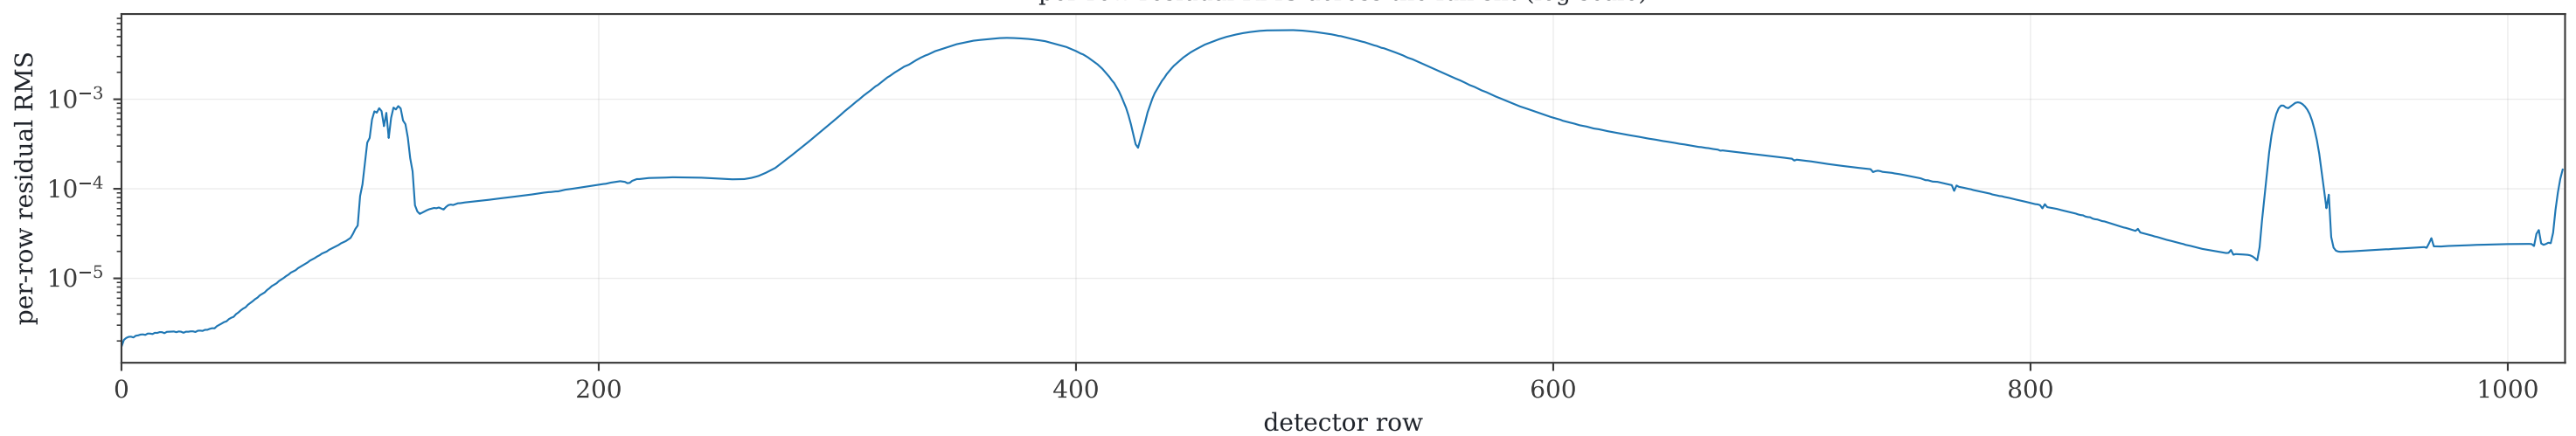

raw residual (symlog, linthresh=0.00015)

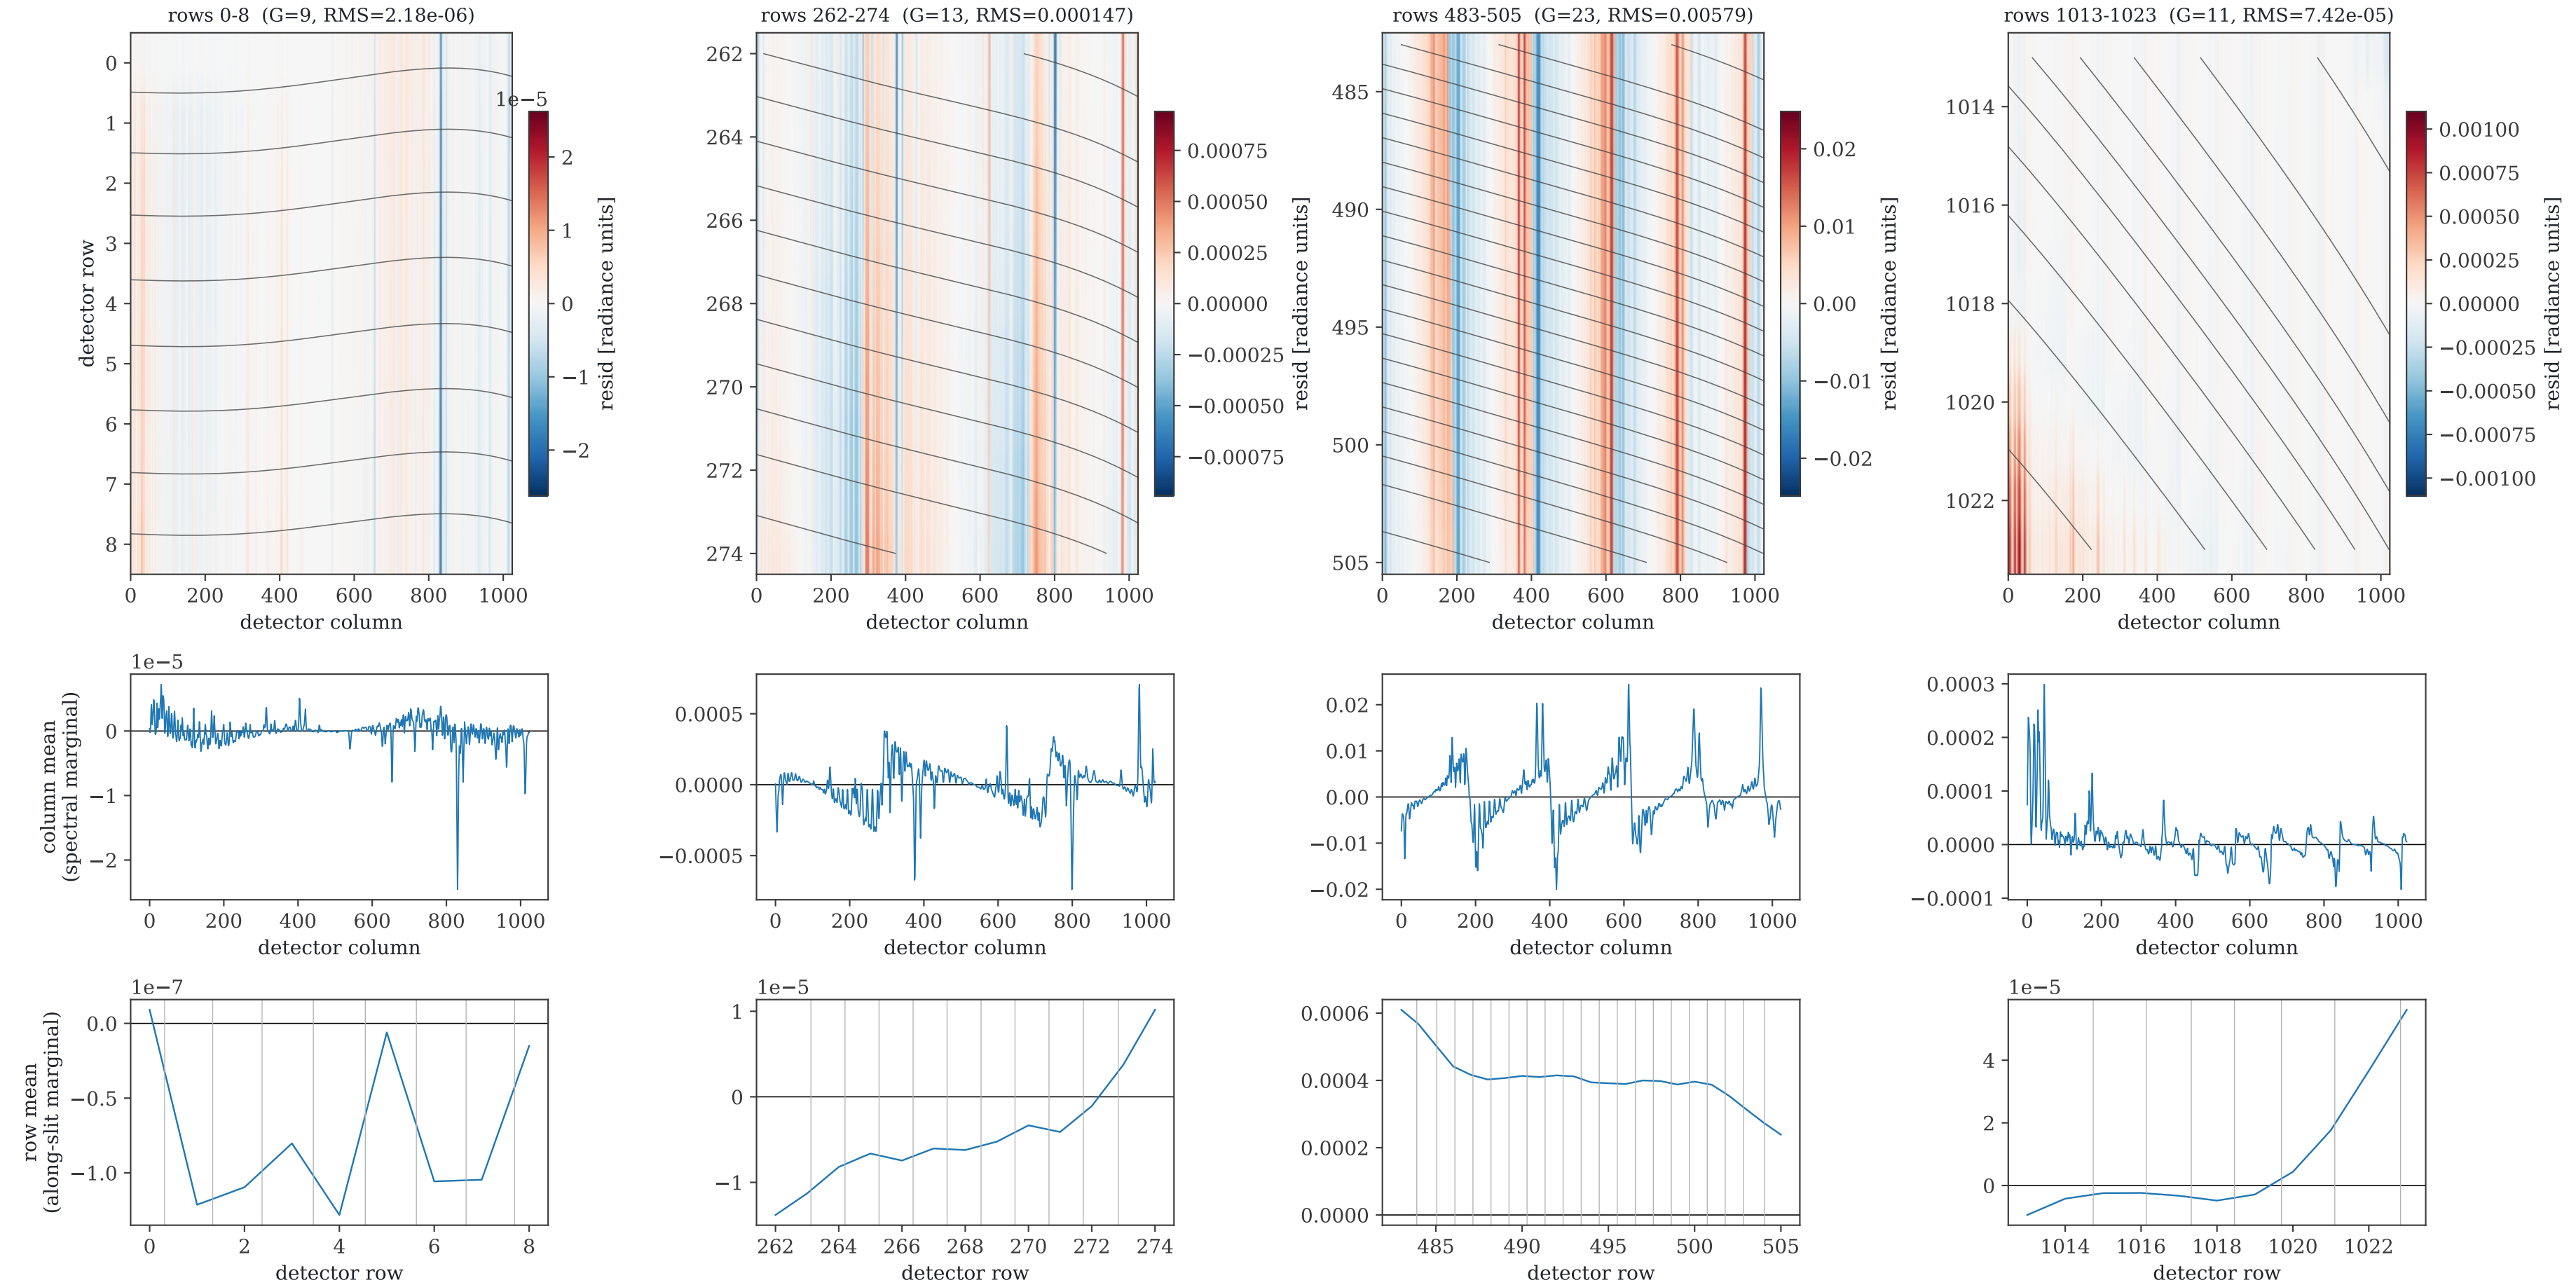

each window normalised by its own RMS (structure, not amplitude)

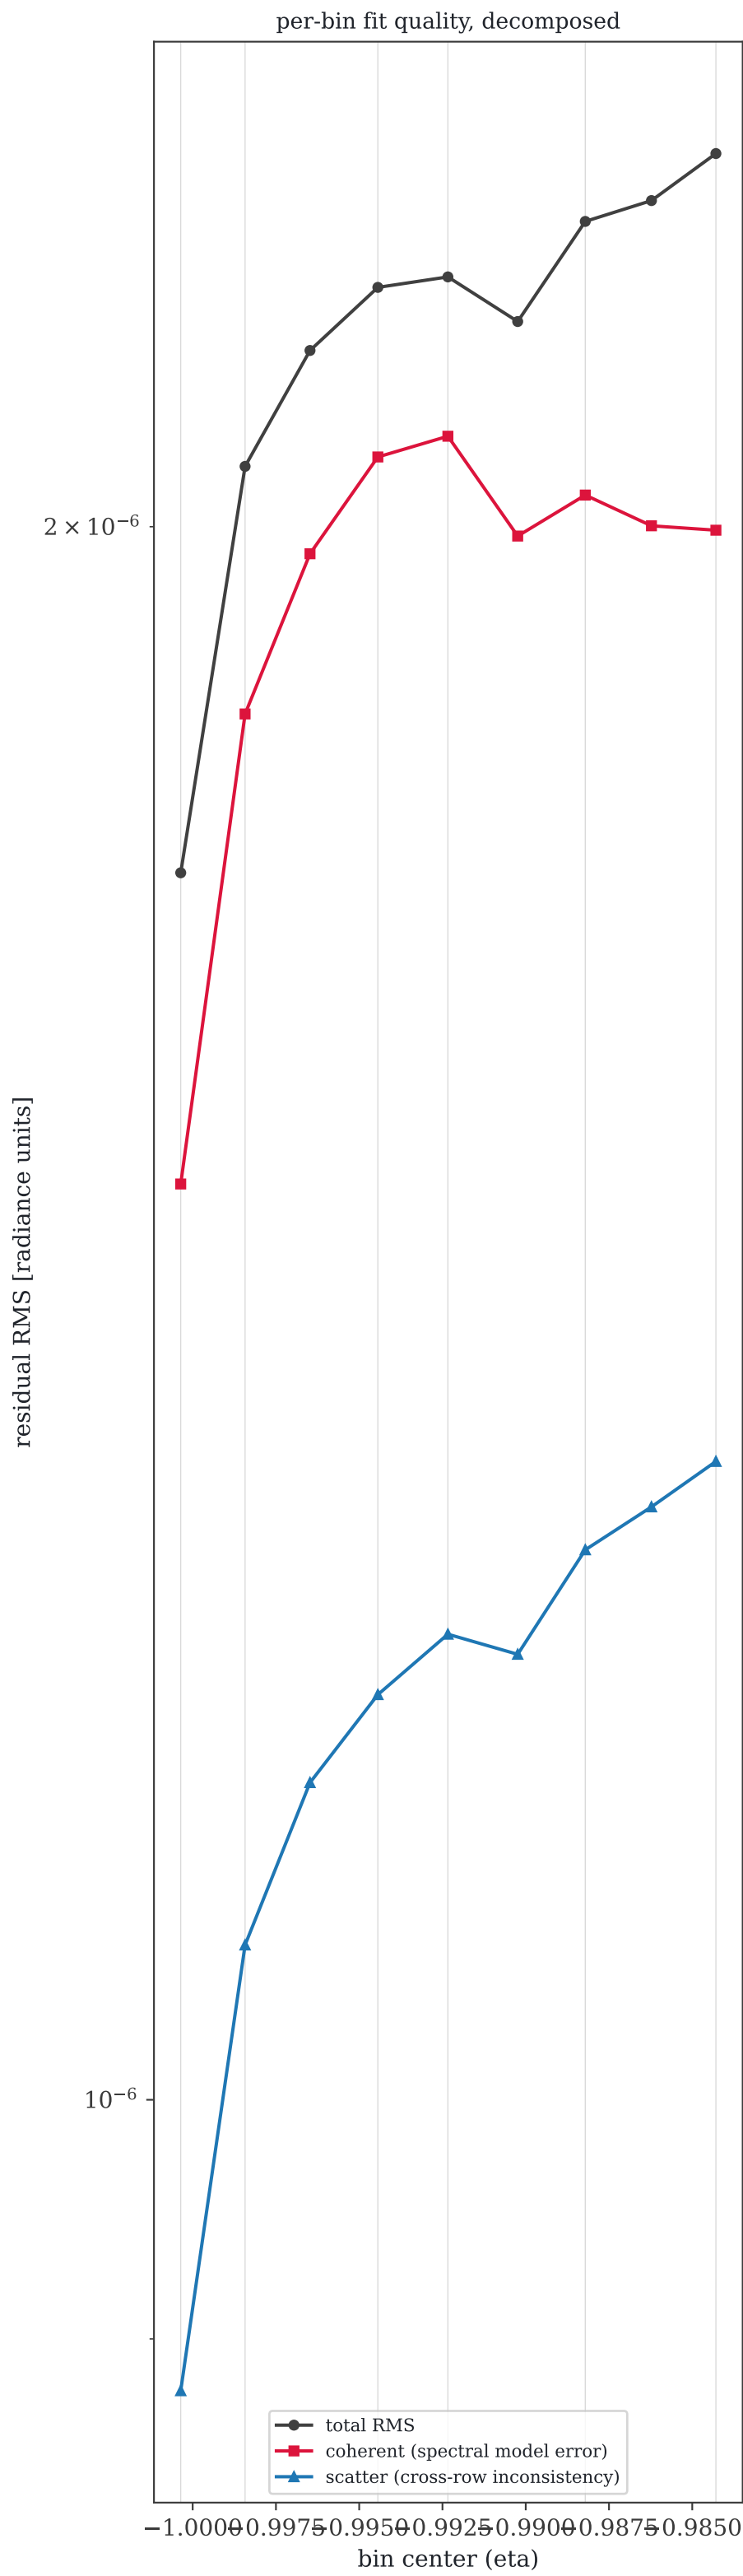

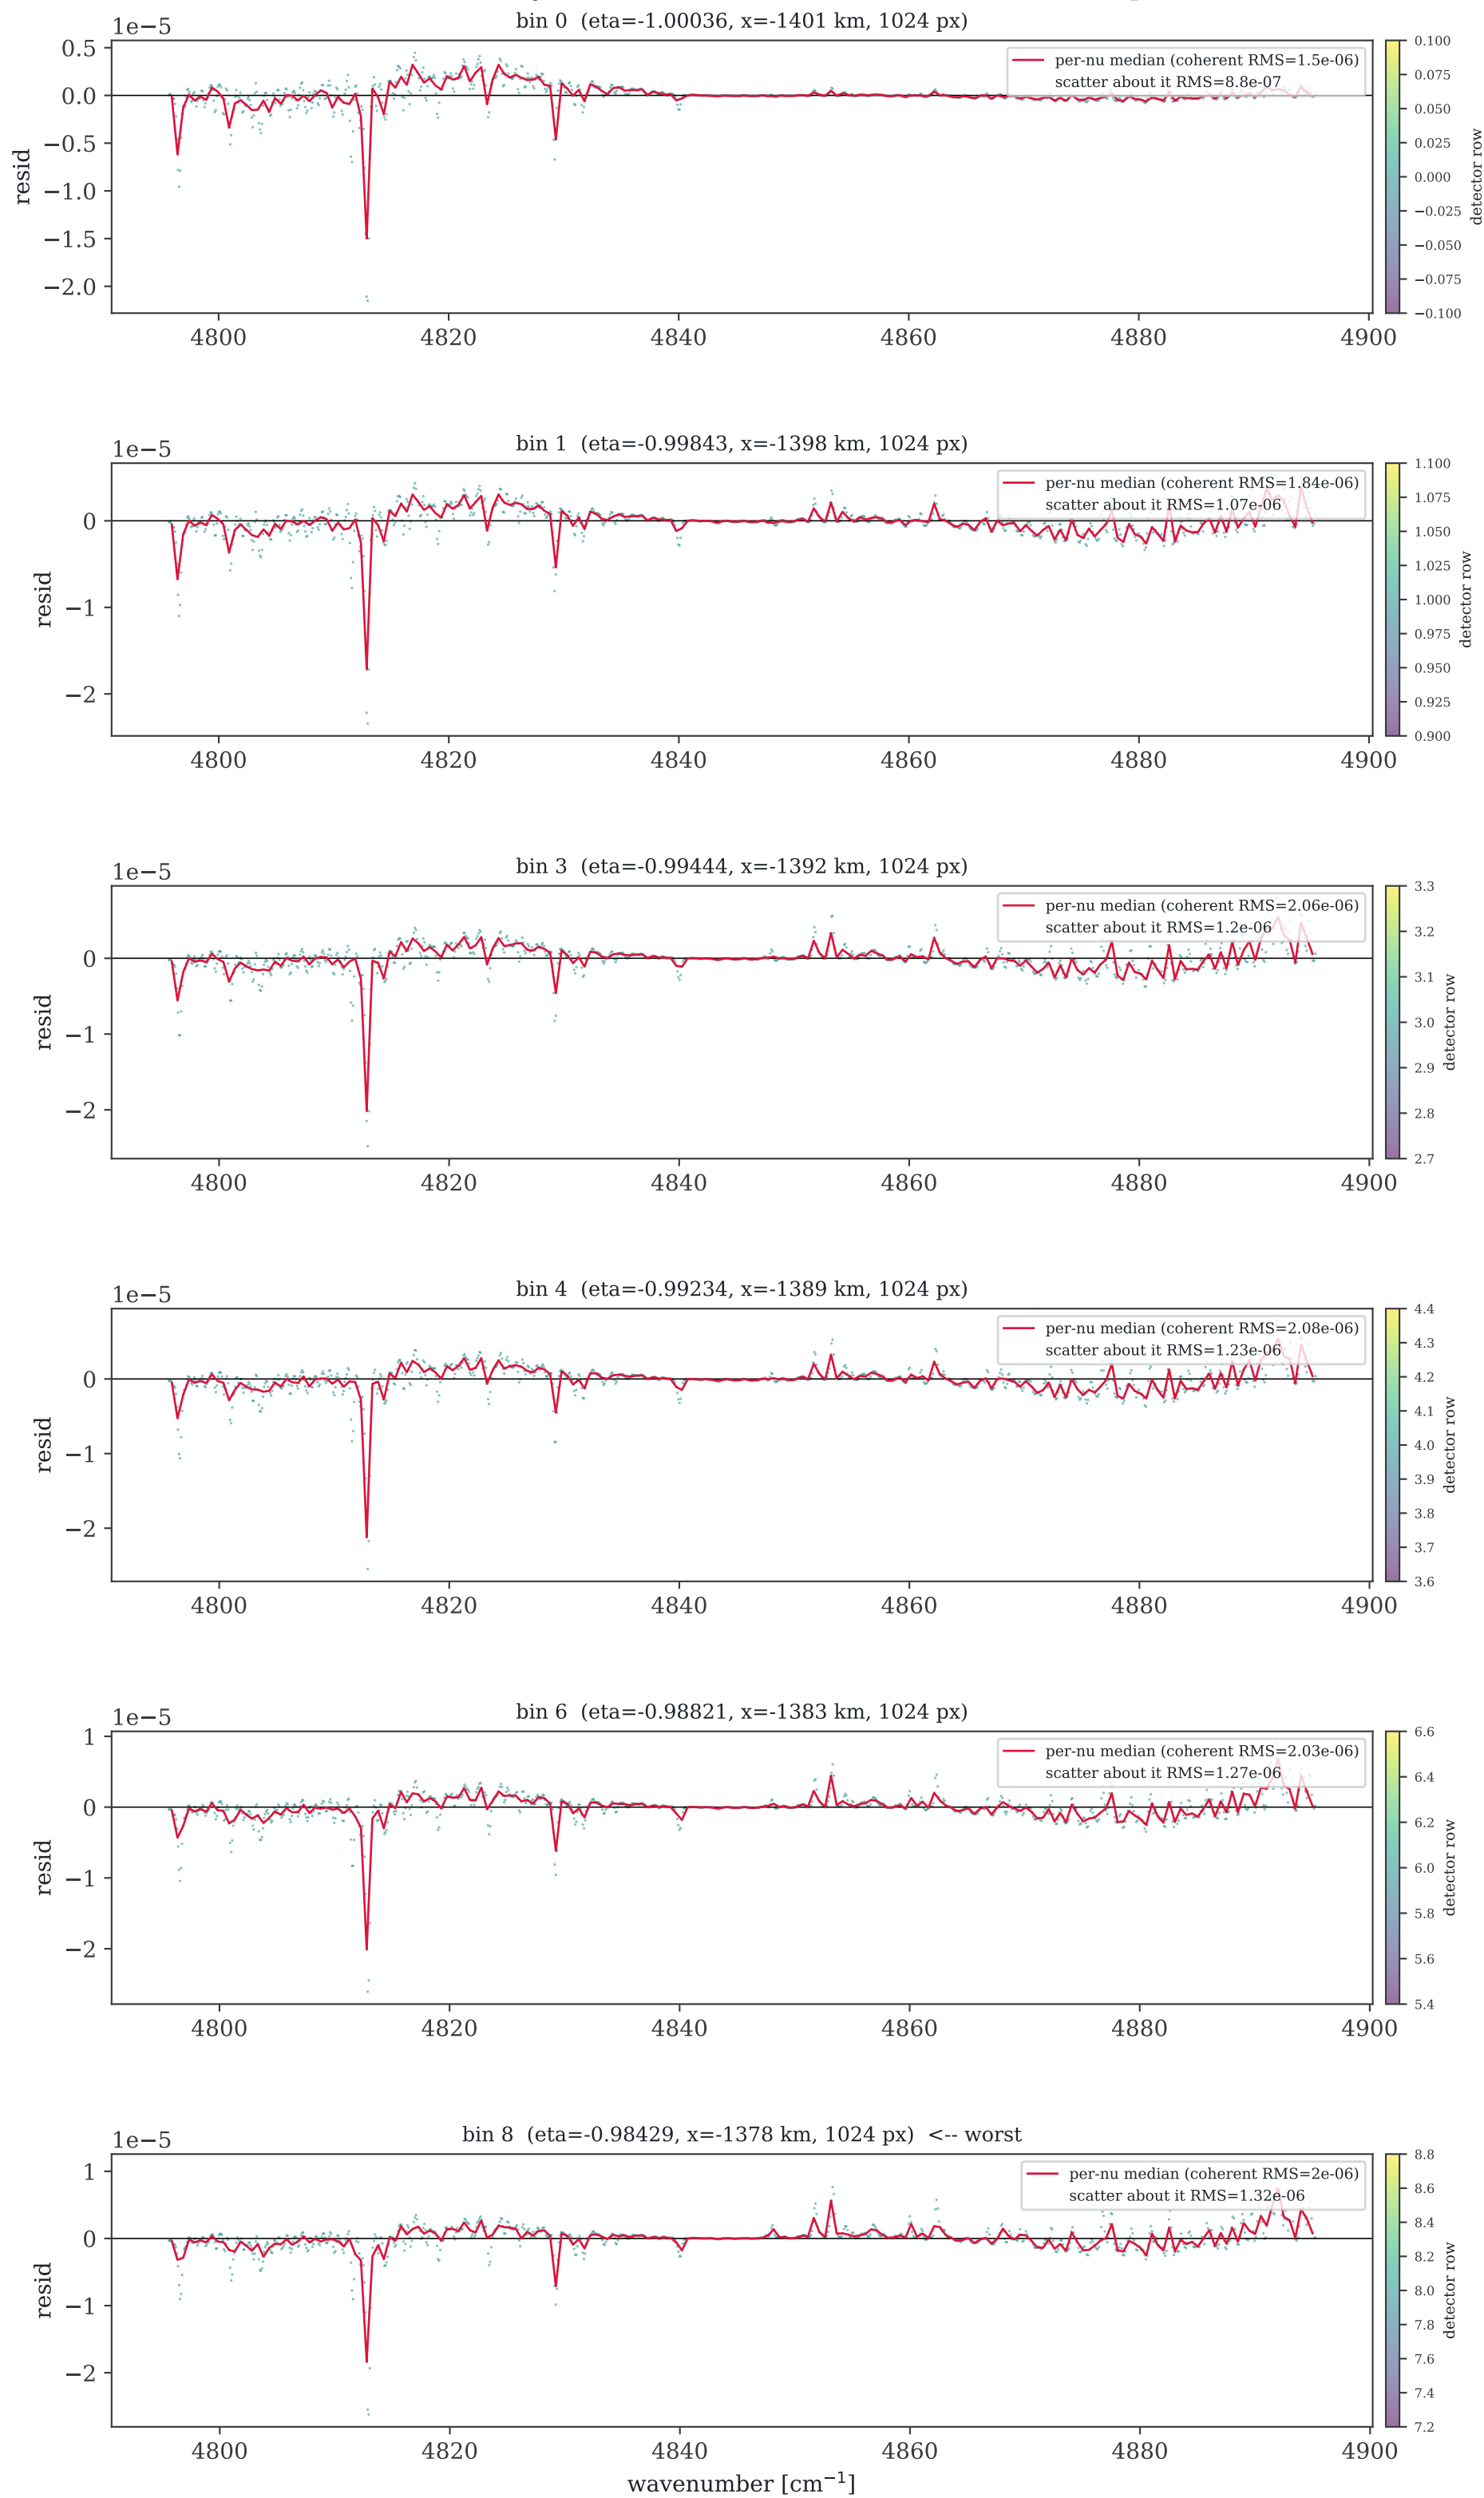

per-row residual RMS across the full slit (log scale)

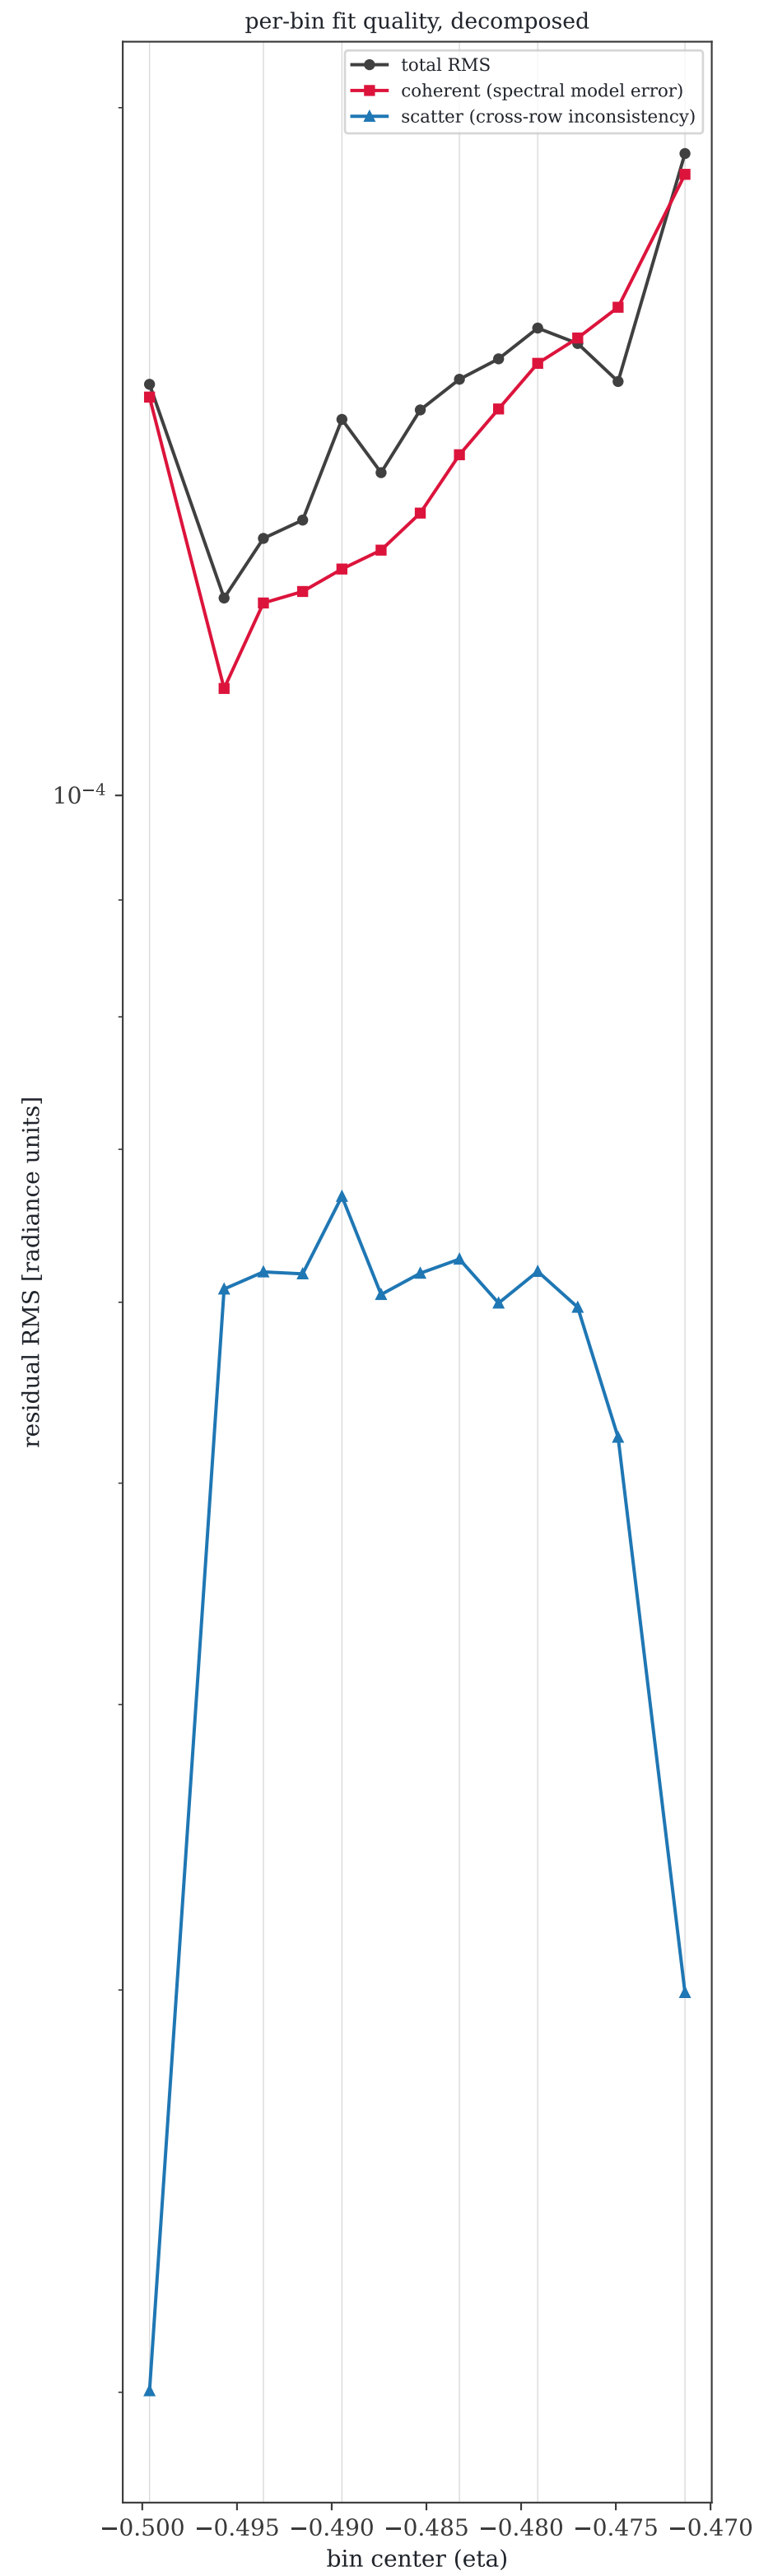

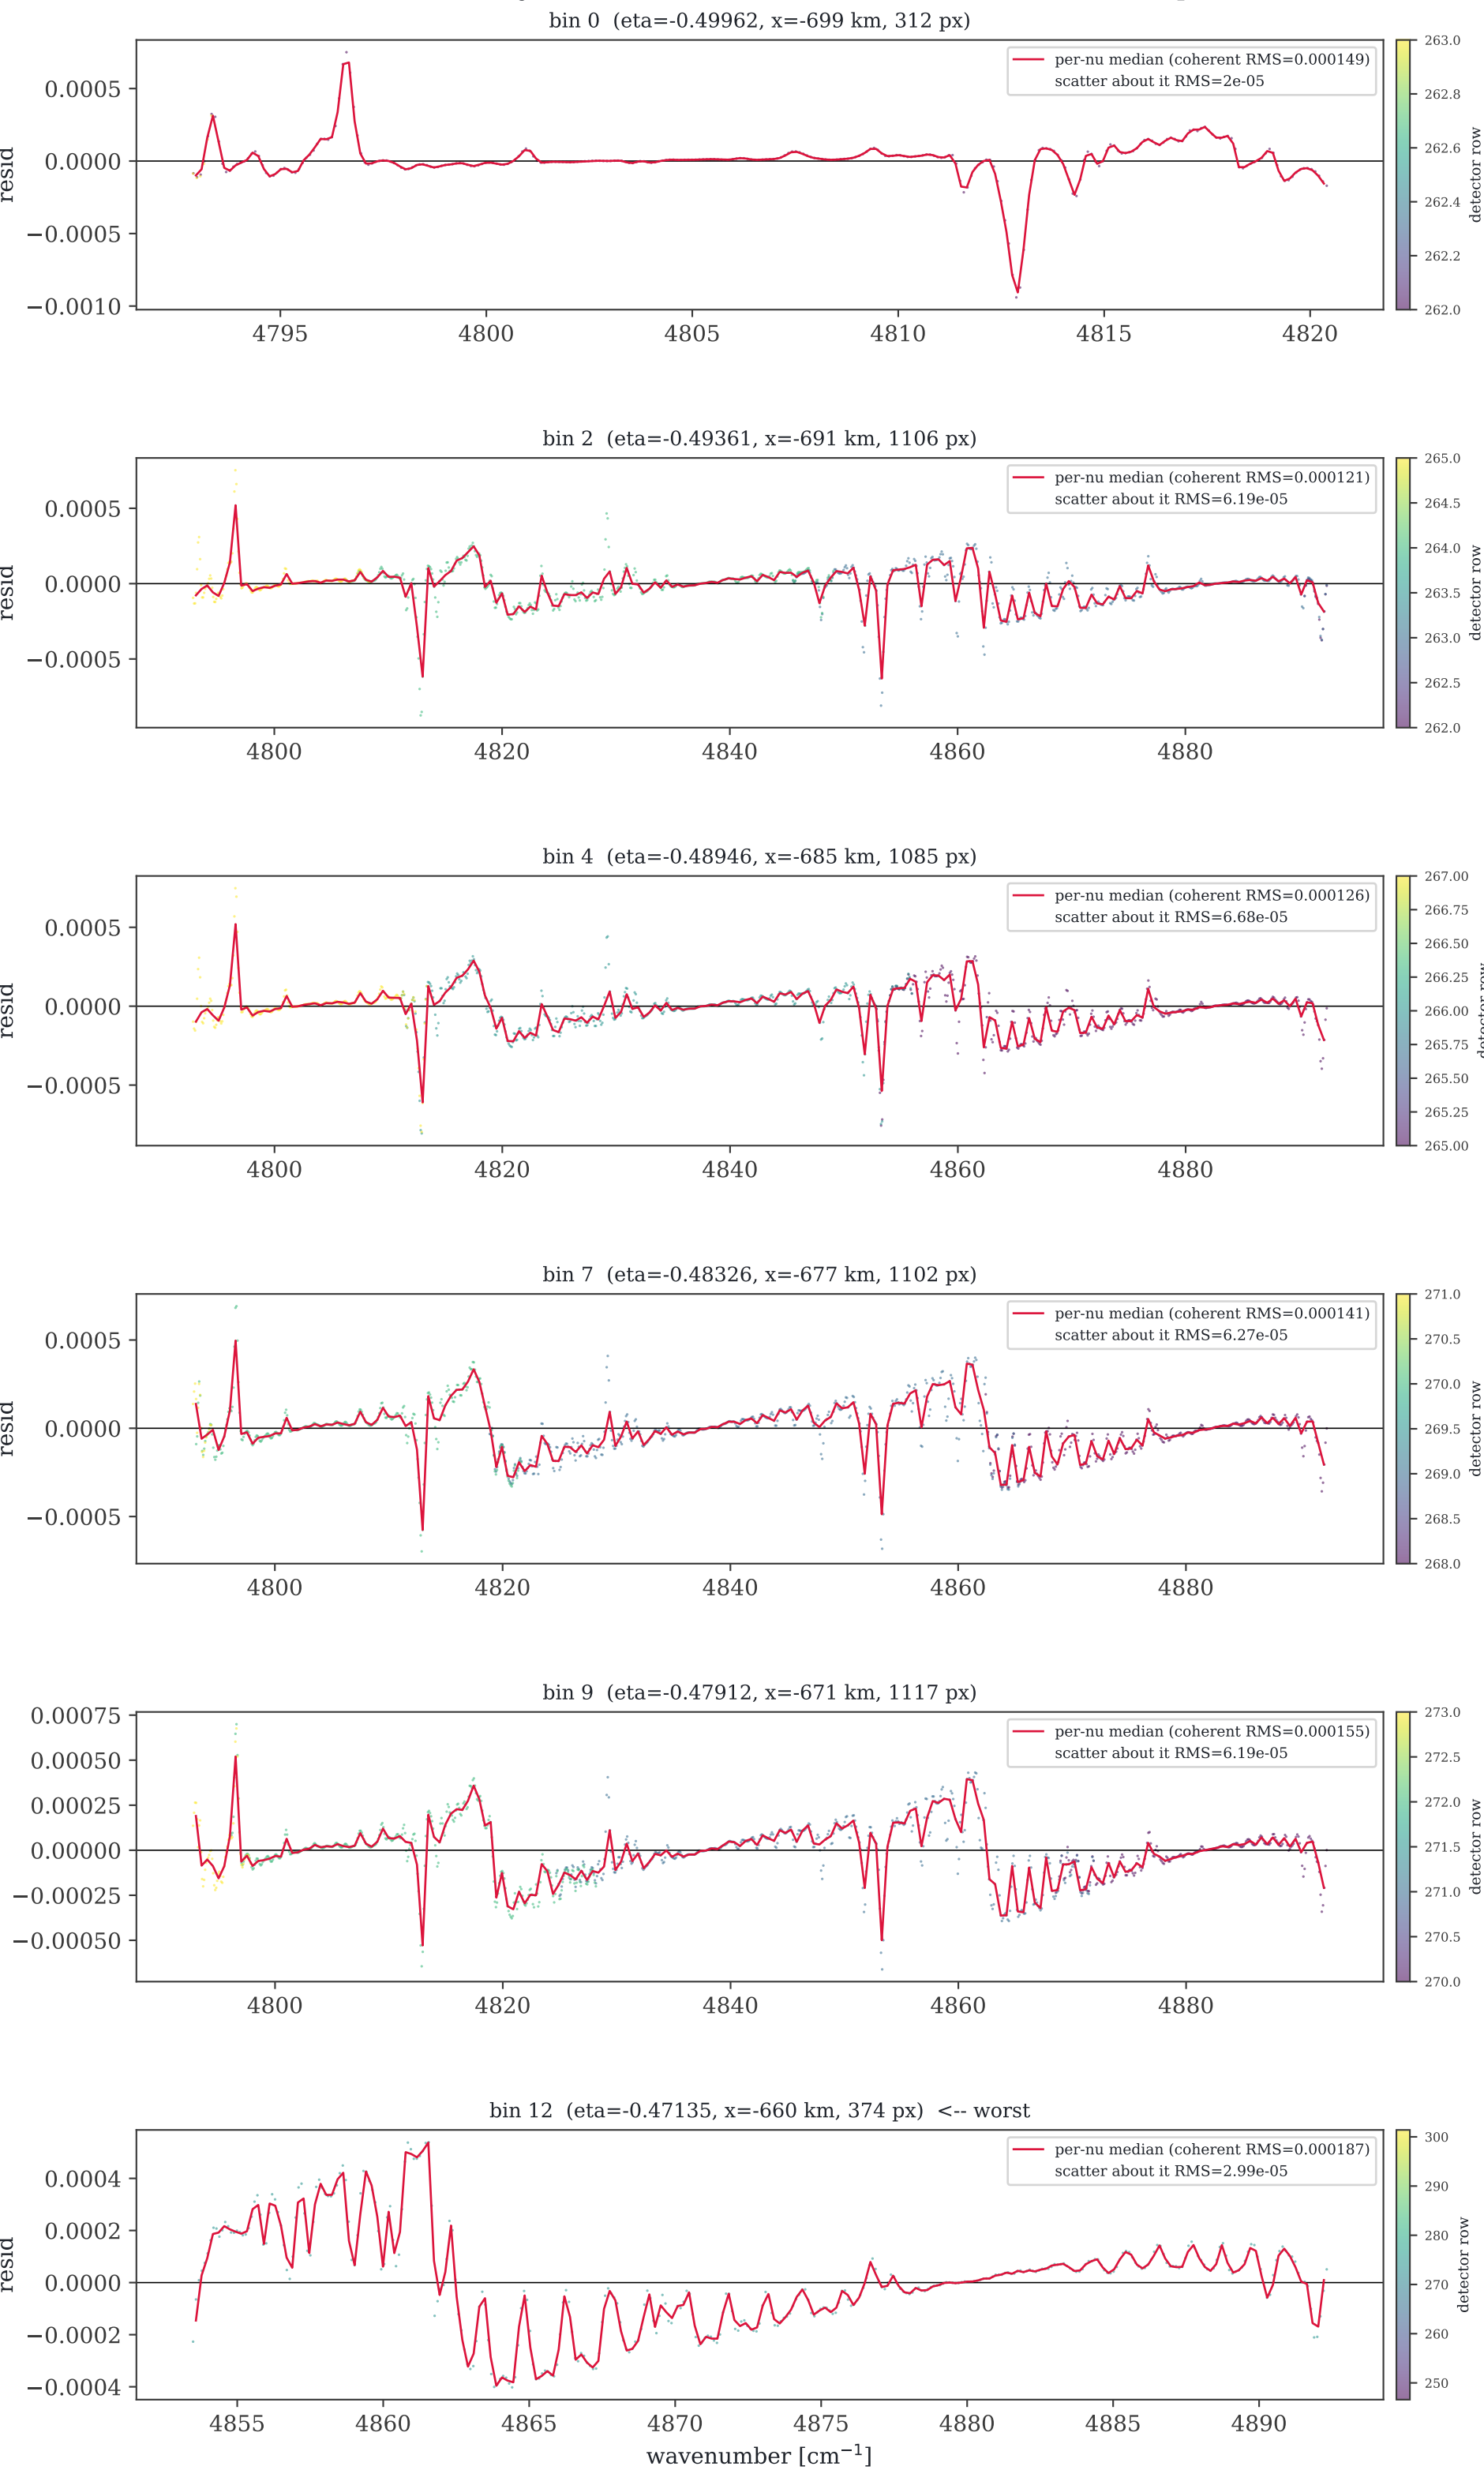

FPA2 joint block -- post-fit residual in DETECTOR space (hires; grey lines = eta bin edges)

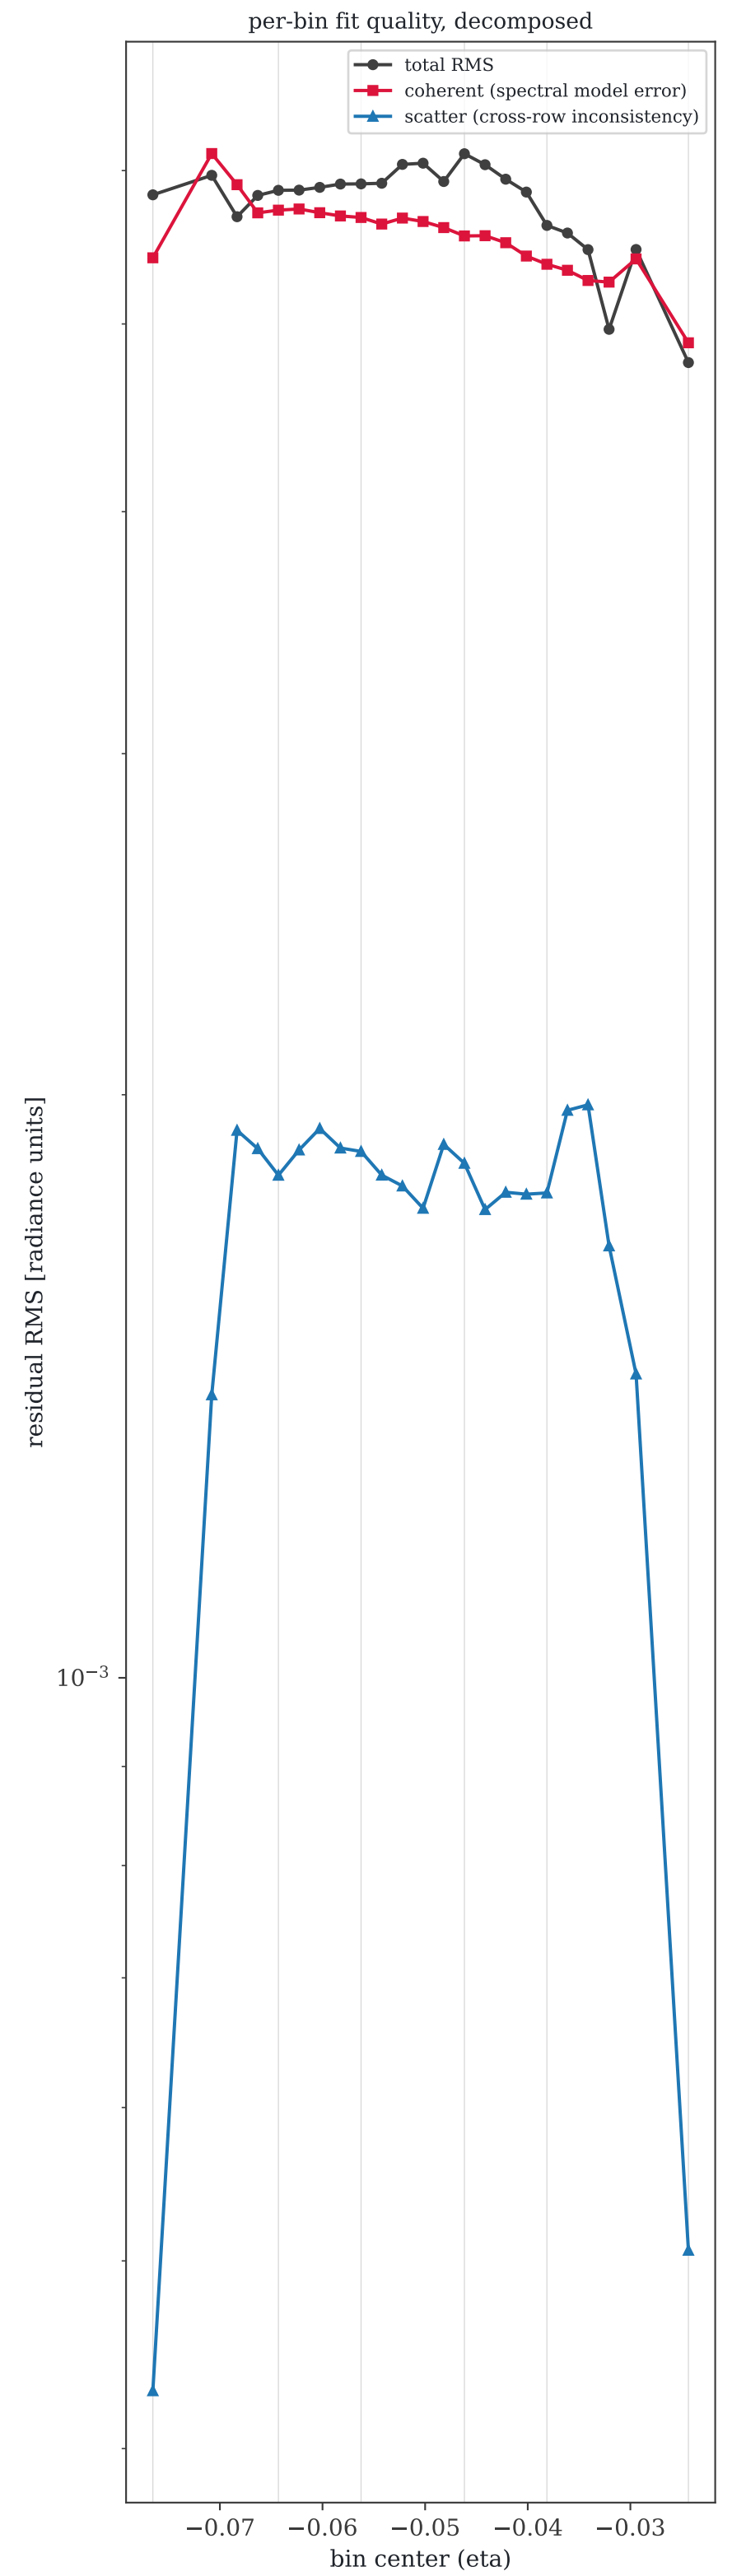

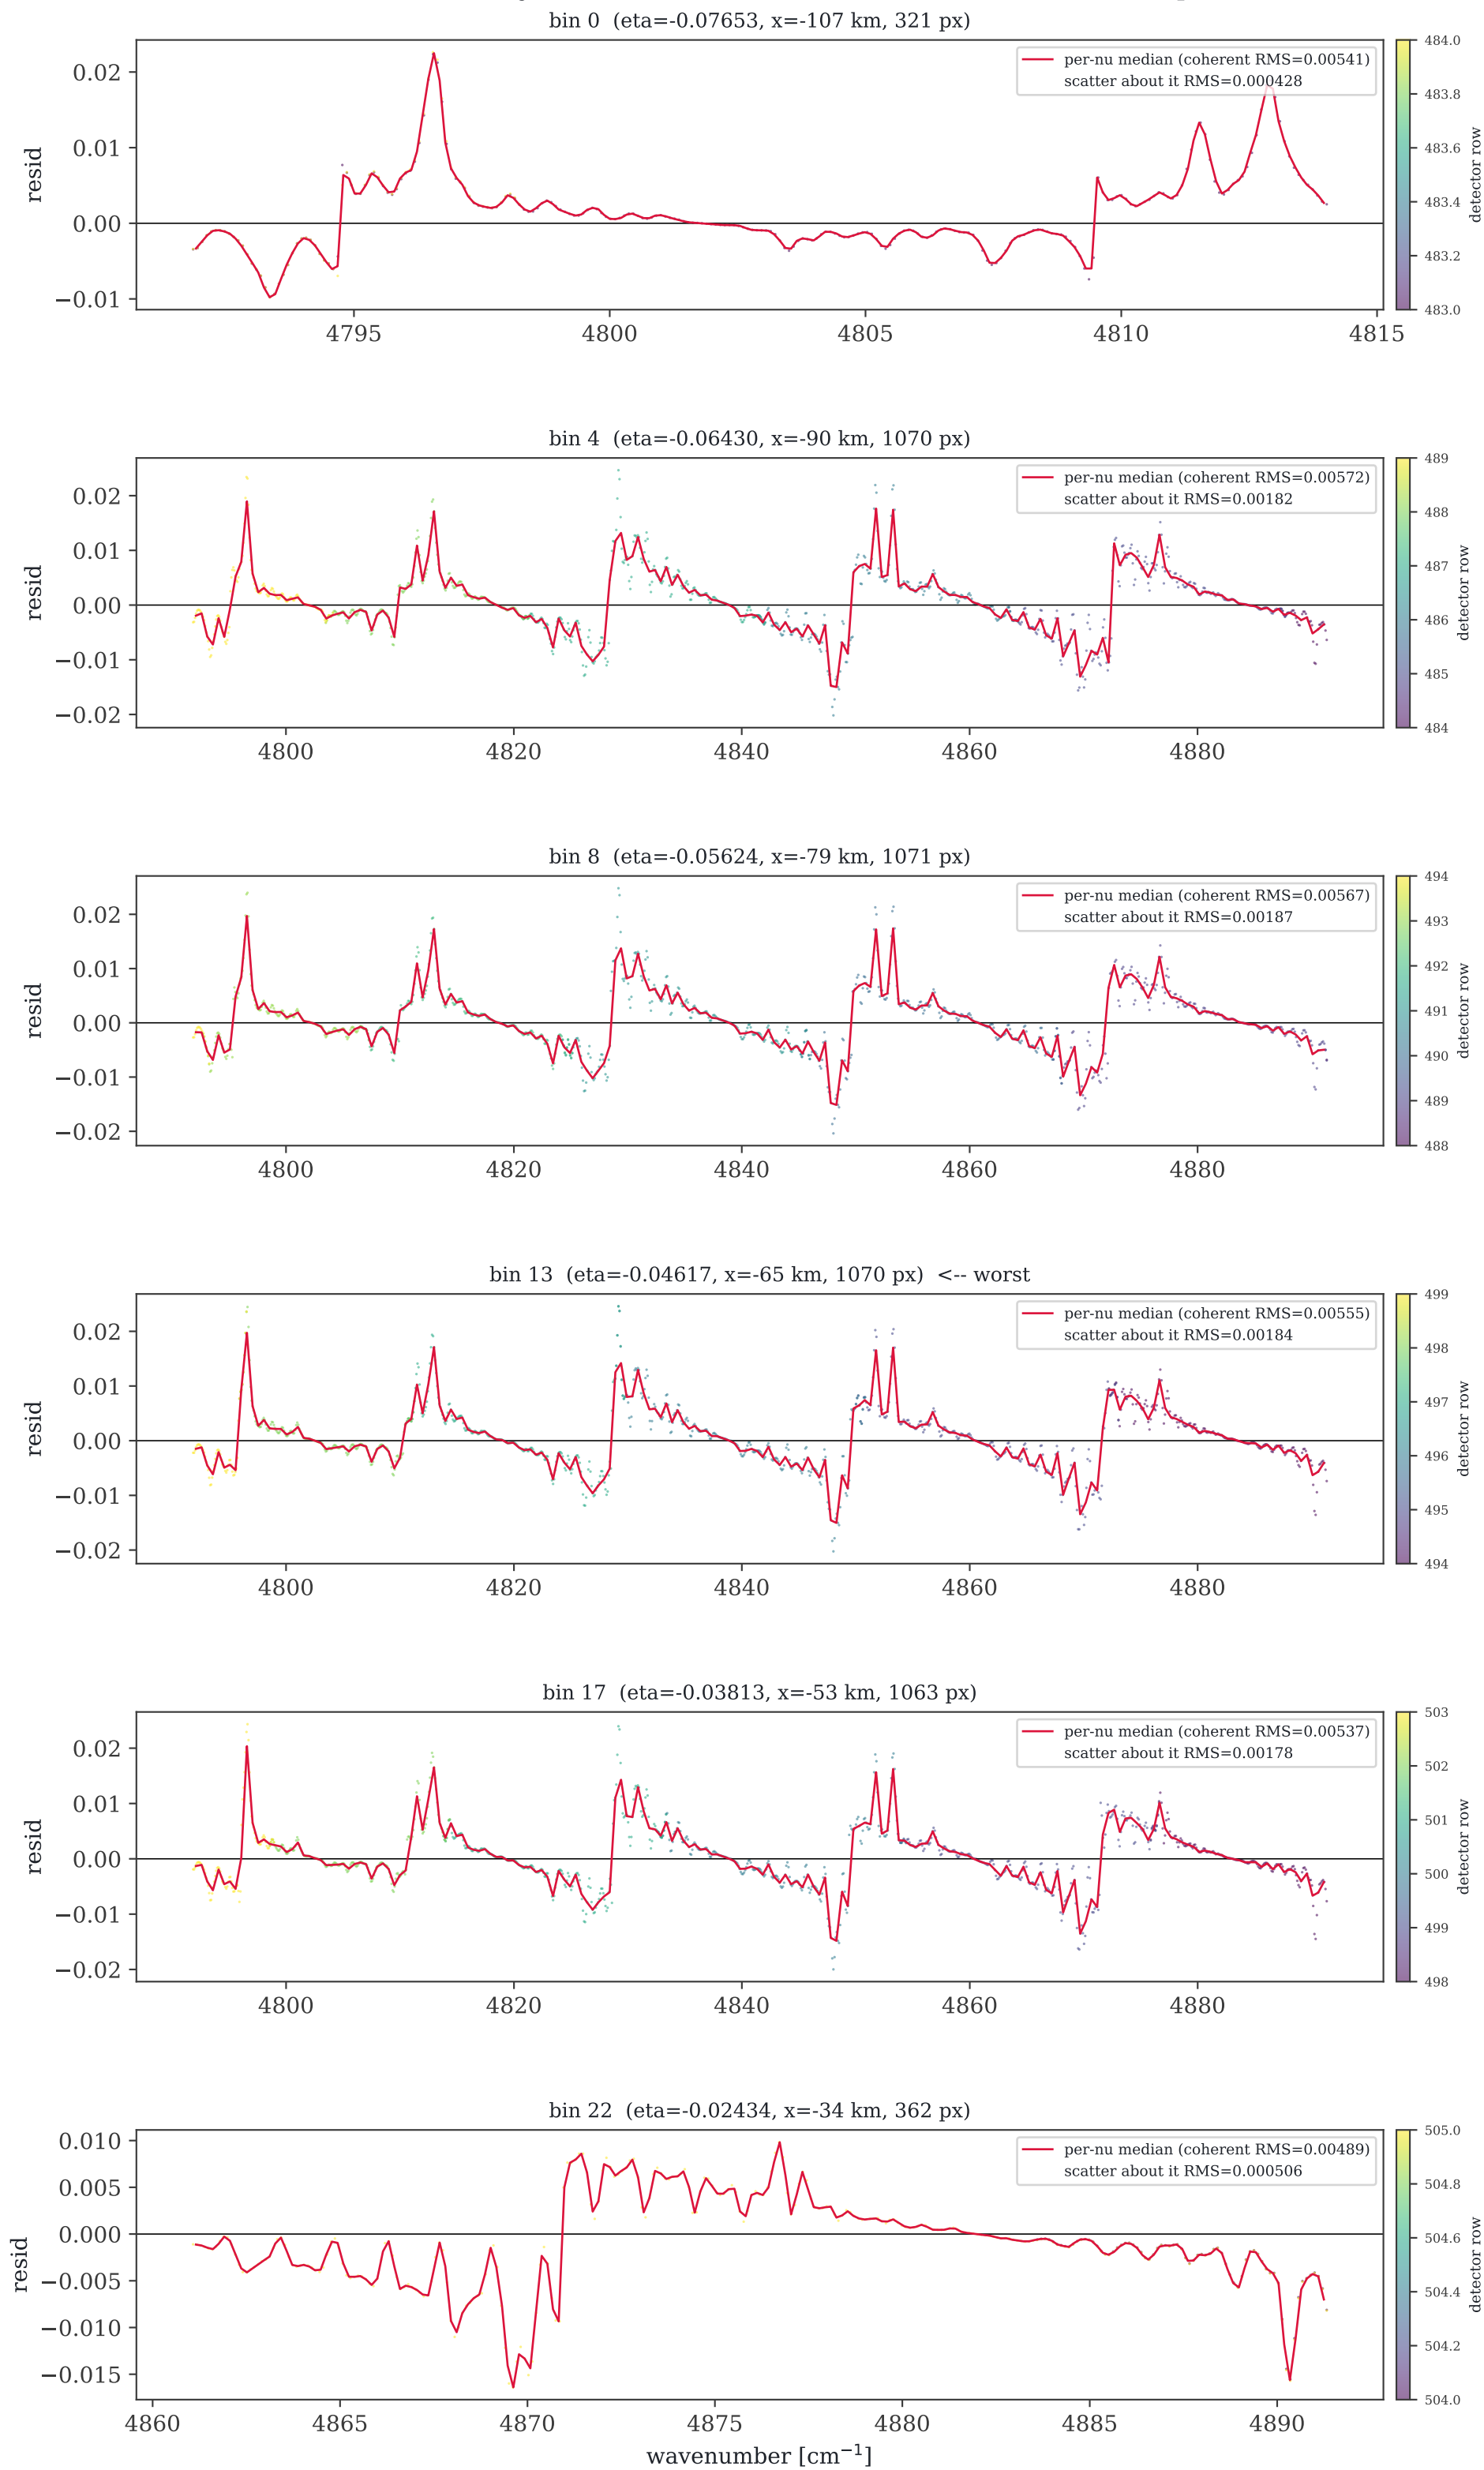

FPA2 joint block rows 0-8 -- residual in FITTING space (hires): within-bin residual vs. wavenumber

FPA2 joint block rows 262-274 -- residual in FITTING space (hires): within-bin residual vs. wavenumber

FPA2 joint block rows 483-505 -- residual in FITTING space (hires): within-bin residual vs. wavenumber

FPA2 joint block rows 1013-1023 -- residual in FITTING space (hires): within-bin residual vs. wavenumber
