

FPA2 joint block -- FULL-DETECTOR post-fit residual (hires), 29 windows stitched, 1024/1024 rows covered, 28 window boundaries marked

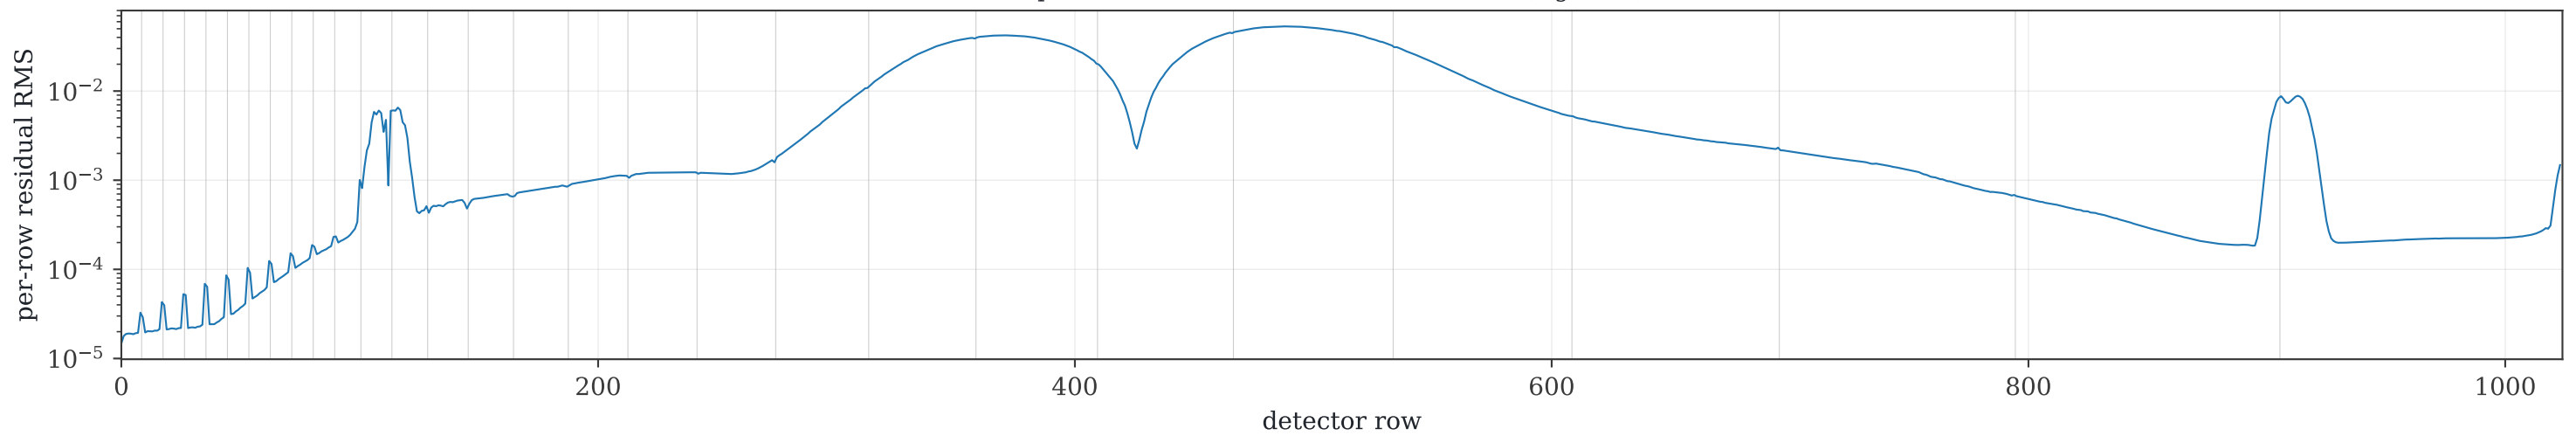

raw residual (symlog, linthresh=0.0015)

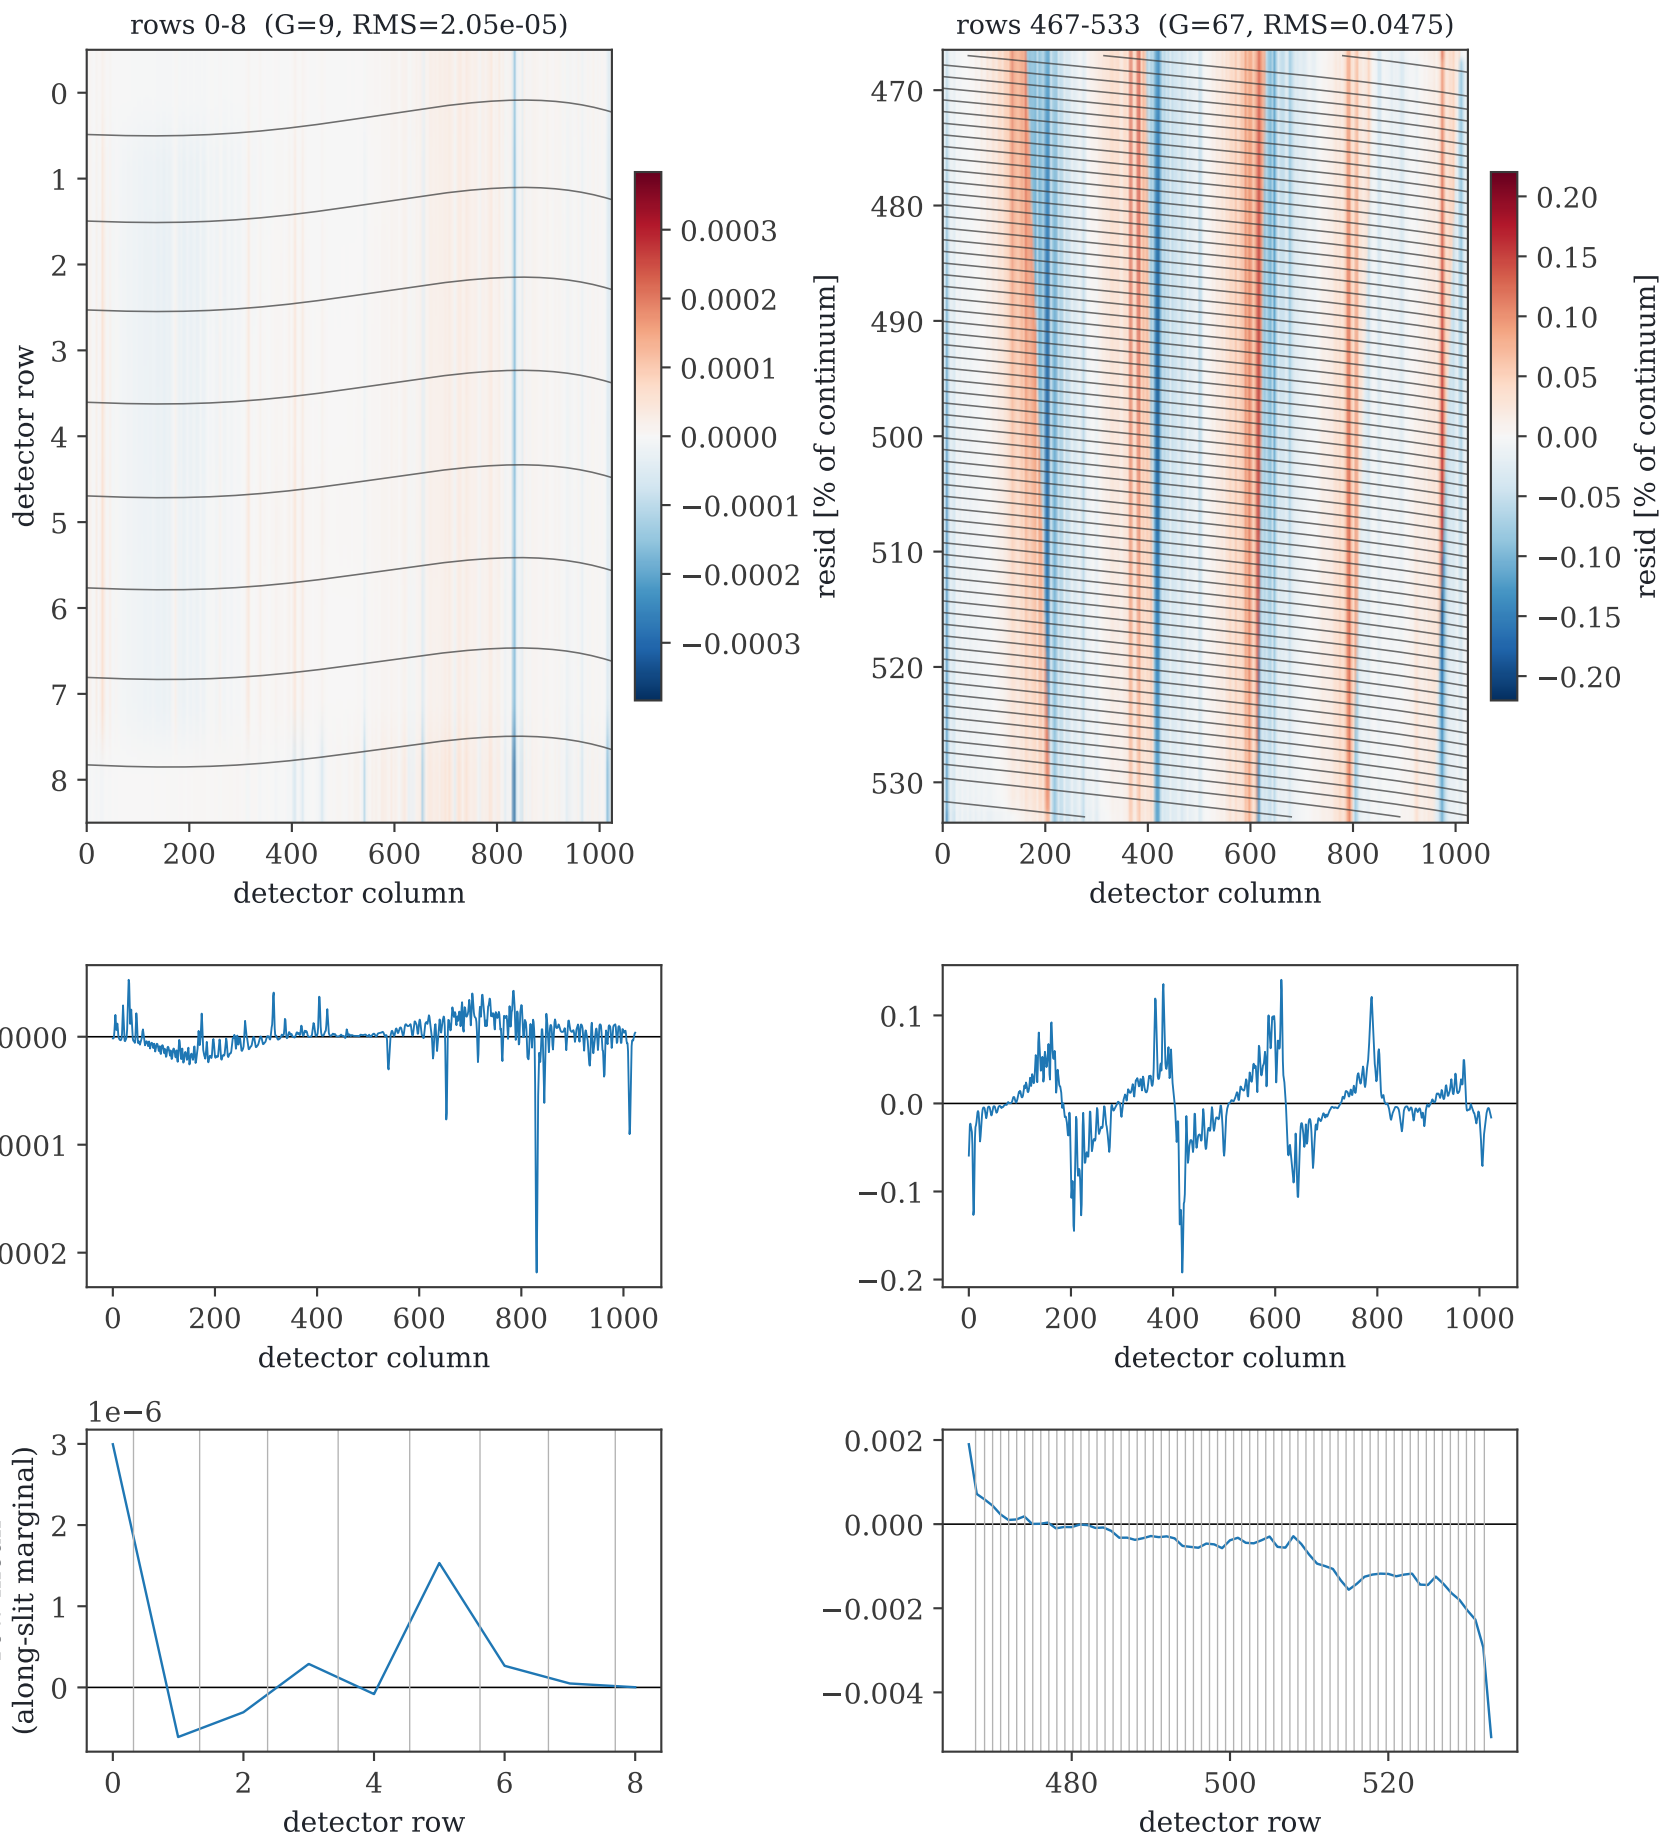

each window normalised by its own RMS (structure, not amplitude)

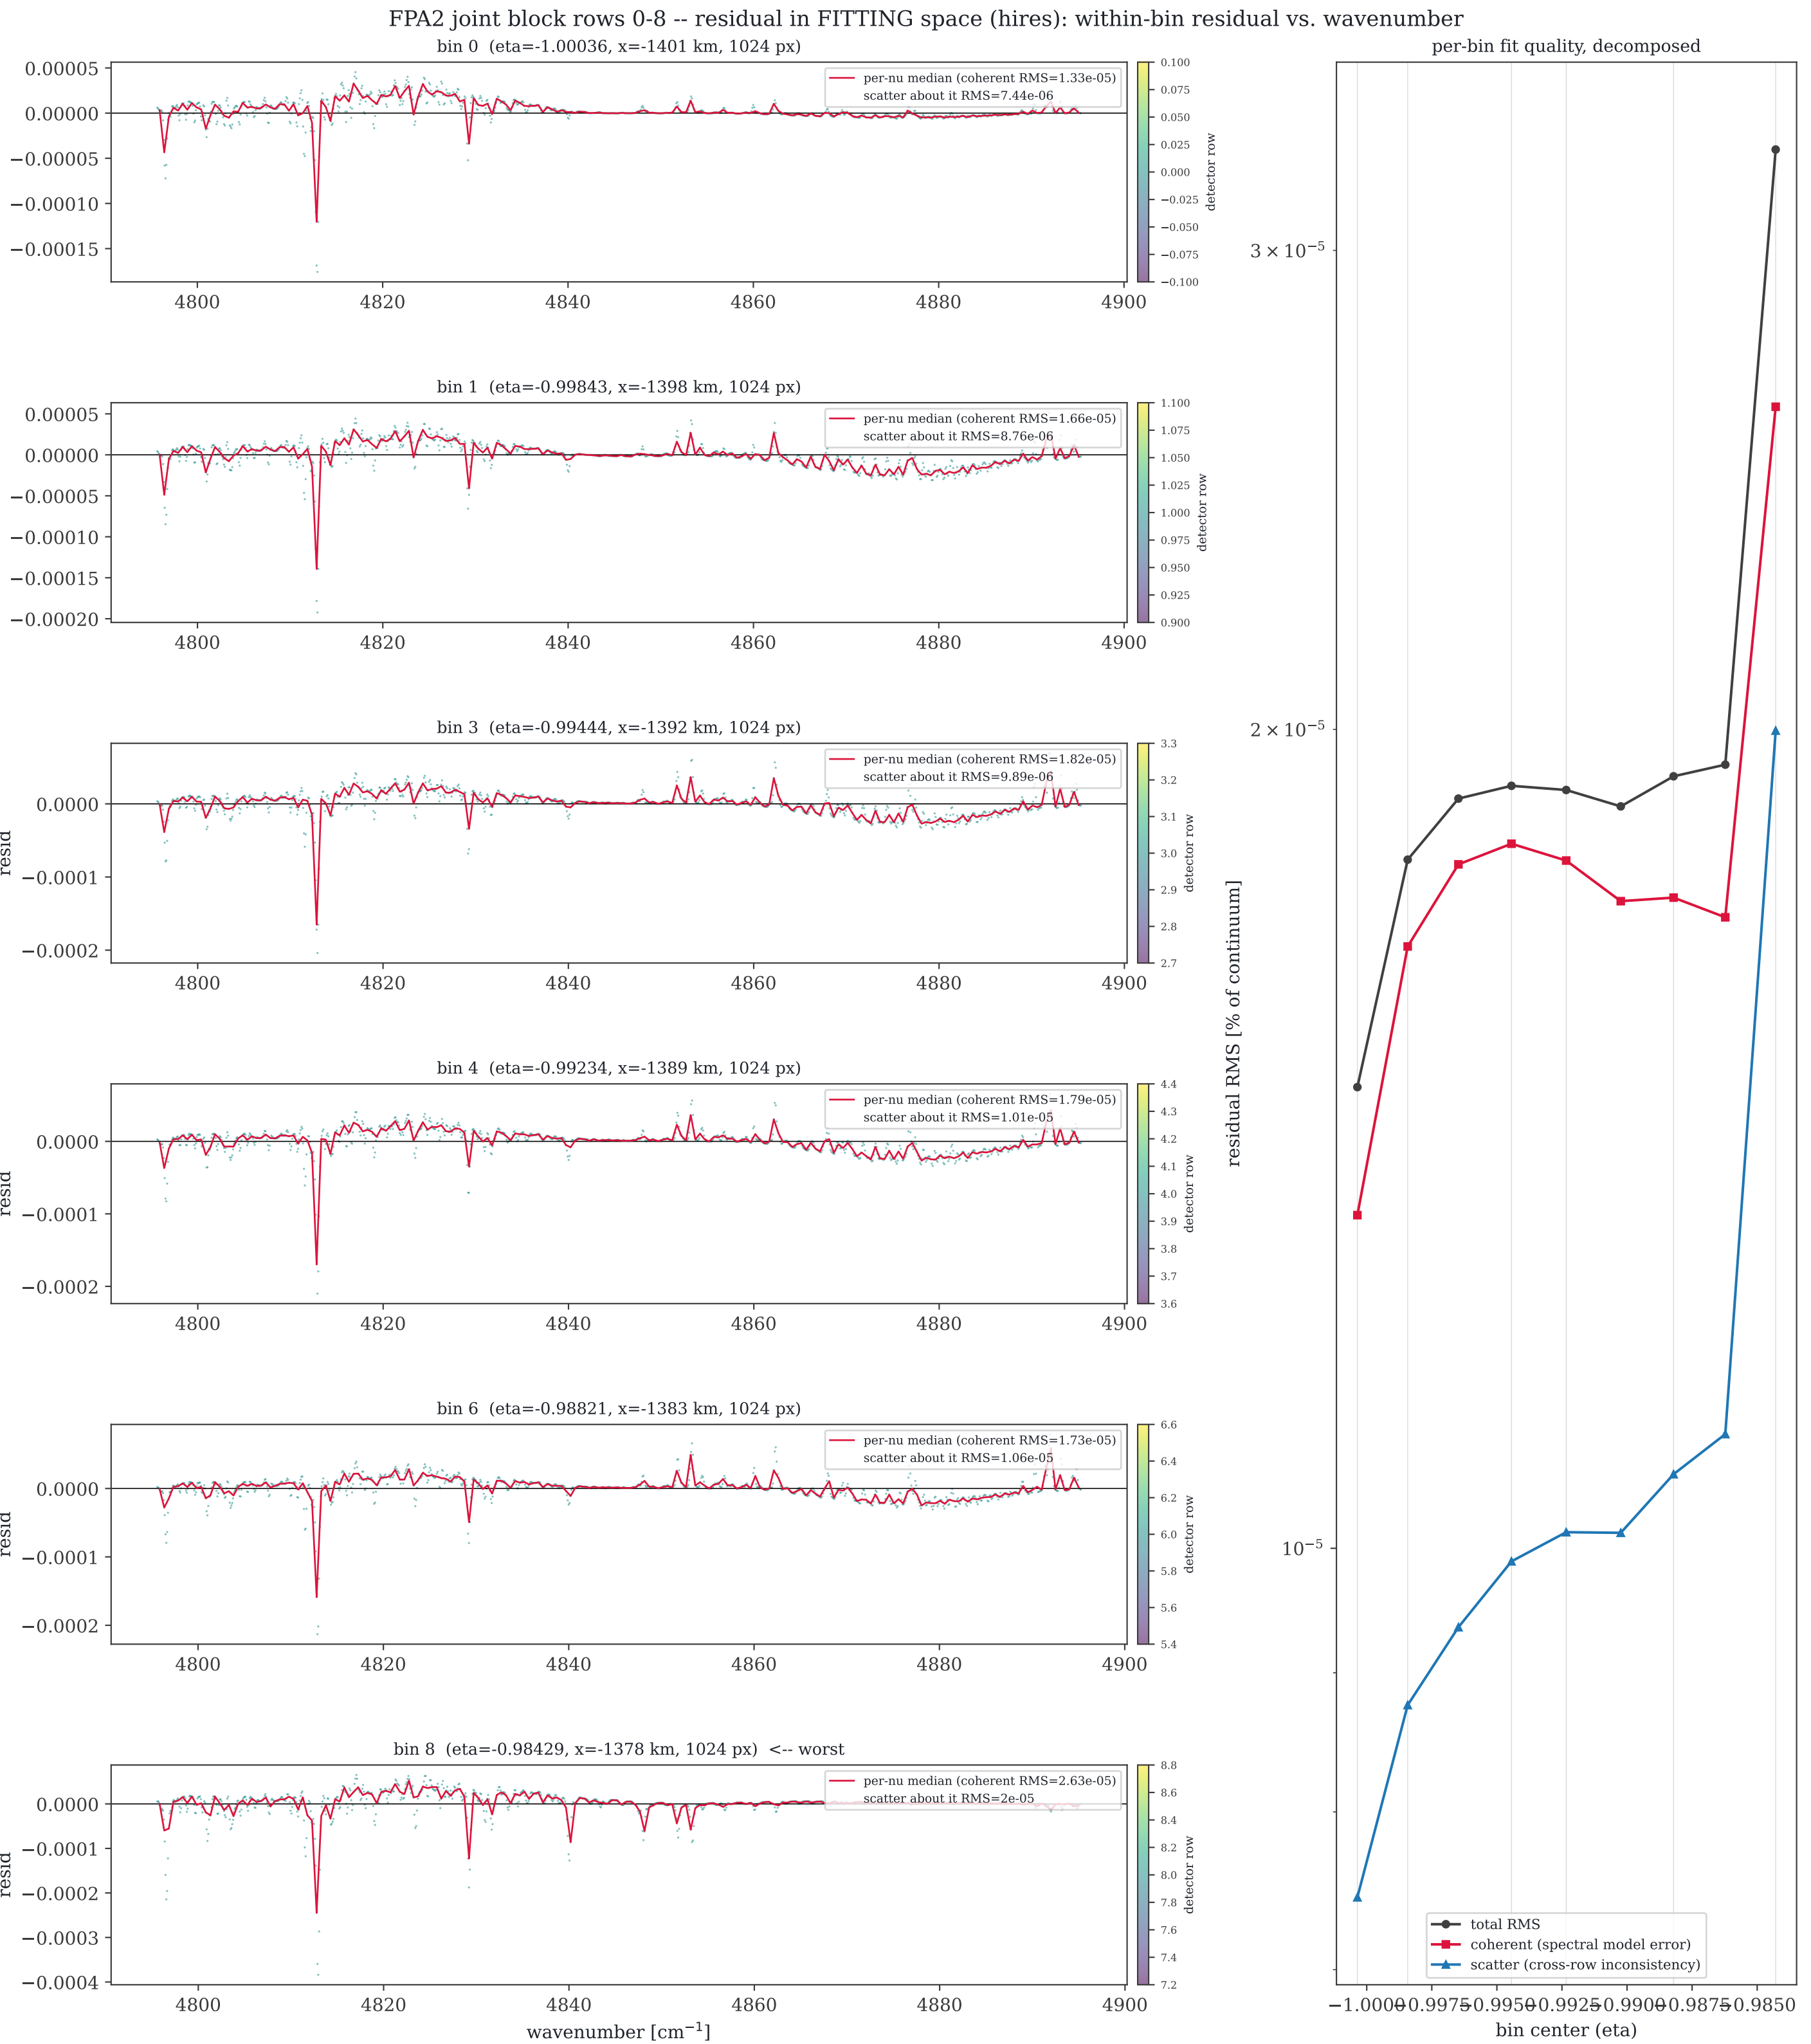

per-row residual RMS across the full slit (log scale)

FPA2 joint block -- post-fit residual in DETECTOR space (hires; grey lines = eta bin edges)

FPA2 joint block rows 467-533 -- residual in FITTING space (hires): within-bin residual vs. wavenumber
